

Energy Management Policy

Ingleton Wood recognises that, as a major user of energy, it has an important role to play in helping to tackle climate change by significantly reducing its CO2 emissions. We are committed to responsible energy management and the highest standards in energy efficiency. It is in the partnership's best interest to reduce the amount of money it spends on energy, releasing funds for other purposes. At the same time, reducing energy consumption helps us to reduce our environmental impact.

Aims

This Energy Policy has been compiled to set out Ingleton Wood's intentions and goals with respect to energy use and management. Its purpose is to help embed efficiency and environmental awareness into everyday business. We aim to increase awareness of energy issues and encourage all of our people to help reduce energy consumption whenever they can, at work, at home, and through the advice we give to our clients.

Commitment

We are committed to responsible energy management and will practice energy efficiency throughout all our premises, plant and equipment, wherever it's cost-effective. We will regularly review our energy providers and ensure they provide truly sustainable energy. We will drive down our Carbon Footprint through our Carbon Management Strategy.

Objectives

- to reduce our dependence on fossil fuels by analysing our Carbon footprint
- to control energy consumption to avoid wasted expense
- to reduce the environmental impact of our energy consumption
- to continually update our Carbon footprint, analyse the data and drive down our corporate Carbon emissions
- to review the potential for investment in renewable technologies at all of our offices

Review

This policy will be monitored and reviewed annually.
